

By popular demand, to cater to the requirements of tape recorder owners whose instruments have high impedance inputs, the Power Supply #4317 has been introduced. It is priced at \$19.50. A ten foot signal cable (unbalanced) is supplied, the unterminated end must be fitted with the correct plug to match the recorder input. Two batteries are required, i.e., a 1-1/2v "D" Cell plus a 67-1/2v "B" (Eveready #416.) The low current consumption gives a battery life of approximately 500 hours.

We are pleased to make a special introductory offer (subject to withdrawal without notice) of: An EK-61-A (omni) Condenser Microphone complete with a #4317 Power Supply @ \$99.50. With an EC-61-A (cardioid), and #4317, the combination is \$109.50. A dealer list is supplied, and we would urge that you contact the one most convenient to you, without delay. If there is no dealer nearby, your order will be promptly shipped postpaid and insured upon receipt of remittance.

The Power Supplies #4316 (battery operated) and #4315 offer, in addition to the Hi-Z unbalanced line, balanced line outputs with the choice of 30/50, 200, or 600 ohms.

These Micro-Miniature Condenser Microphones offer the possibility of "Recording Studio" quality at price levels heretofore impossible.
